NC STATE UNIVERSITY

May 2018 Graduate Future Plans Survey All Respondents: Overview

This overview report presents findings from doctoral and master's students participating in the May 2018 Graduate Future Plans Survey (GFPS). Additional reports on the survey methods and analysis, college results, and departmental summaries, as well as a copy of the questionnaire, are available on the OIRP website.

The May 2018 Graduate Future Plans Survey population consists of the 193 doctoral students and 1,565 master's students who had applied to graduate and were conferred degrees as of commencement day, May 12. Of those 1,758 graduates, 143 doctoral degree recipients and 1,075 master's degree recipients submitted the Graduate Future Plans Survey for an overall response rate of 69.3 percent (74.1% of doctoral graduates and 68.7% of master's graduates).

Plans Following Graduation

Students graduating in May with either a doctoral or master's degree were asked about their primary plans for the coming year, with the option to select multiple responses. Four-in-five doctoral graduates (81.1%) indicated they would be employed, either in a position they had prior to graduation or in a new position for which they had a signed contract. One-fourth of the doctoral degree recipients said at the time of the survey that they were actively seeking or planning to seek employment (25.2%). Sixteen percent of the doctoral graduates who indicated they will continue to work at a place of employment they had obtained prior to or during their graduate program said they were or will be seeking a new position after receiving their degree (15.9%). Finally, one student receiving a doctoral degree said they planned to return to graduate/professional school in the coming year to pursue another degree and a very small number of doctoral graduates said they had "other plans" (2.1%).

Almost two-thirds of the master's degree recipients (63.6%) indicated they had secured employment for the coming year, either in a job they had during their graduate program or in a new position. Another one-third (31.7%) said they were actively seeking or planning on seeking a new position to start in the coming year, including 13 percent of those who said they will be continuing to work at a place of employment they had obtained prior to or during their degree program (12.7%). Thirteen percent of the master's degree recipients (12.6%) said they would be continuing their education in pursuit of another degree. A very small number of the master's students indicated they do not plan to be employed or enrolled in graduate/professional school, and two percent said they had "other plans" (2.2%).

Table 1: Primary Plans Following Graduation, by Degree*

| | NCSU (N = 1,218) | | _ | ctoral = 143) | Master's (N = 1,075) | | |
|------------------------------|---------------------|-------|-----|------------------|----------------------|-------|--|

| Pursuing or planning to pursue new/change of employment | 52 | 13.1% | 7 | 15.9% | 45 | 12.7% |
| Not pursuing or planning to pursue new/change of employment | 345 | 86.9% | 37 | 84.1% | 308 | 87.3% |
| Total | 397 | 100.0% | 44 | 100.0% | 353 | 100.0% |

Post-Graduation Employment

This section of the report provides detailed information specifically on those graduate students who indicated at the time they completed the survey that they had obtained a full-time position, followed by information provided by those who said they were actively seeking employment. Finally, this section contains a brief look at those few respondents who said they had not yet begun to search for new employment, but planned to do so in the coming year.

Full-Time Employment

Almost all respondents who indicated they had definite plans for employment after graduation said they will be working full-time (97.0%).

Respondents were asked what their employment plans would constitute, and were given the option to select multiple responses. Just over one-fourth of those receiving a doctoral degree and obtaining a full-time position said they have a signed contract or made a definite commitment to a postdoctoral fellowship for the coming year (27.0%), and 44 percent have secured new employment in a non-postdoc position (44.1%). A sizeable number said they will be continuing to work at a place of employment they obtained during their graduate program (26.1%) or are returning to or continuing in a position they had before pursuing their degree (14.4%).

Just over half of the master's students who have secured a full-time position said they had a signed contract or made a definite commitment to a new job to begin after graduation (52.0%). One-third will be continuing in a position they obtained while enrolled in their master's program (32.8%), and one-fifth said they will be continuing in or returning to a position they had prior to enrolling in their graduate

program (20.5%). A small number of master's graduates with full-time employment said they will have an internship or clinical residency position for the coming year (1.7%).

Table 3: Full- or Part-Time Employment, by Degree (among those securing any type of employment)

| Have signed contract or made commitment for an internship or clinical residency | 11 | 1.4% | 0 | 0.0% | 11 | 1.7% |

^{*}Respondents could indicate more than one type of activity.

The Job Search

Graduate students with full-time employment who said they will be employed in a position they accepted at the time of graduation (50.8%) or who said they will be working full-time at a place of employment they had obtained during their graduate program (31.9%) were asked about their job search experience. Graduates who said that their employment plans will involve returning to or continuing to work at a place of employment for which they had begun working *prior* to the start of their graduate program are excluded from this analysis.

Over half of all graduates with full-time employment in a position they had obtained at the time of graduation or during their graduate program reported starting their job search six or more months before graduation (59.7%), while just seven percent started looking for a job less than three months prior to graduation (7.2%). The vast majority of doctoral graduates indicated beginning their job search six or more months before graduation (85.8%), compared to just over half of master's graduates saying they had begun to look for a job in the same period of time (54.8%).

Table 5: When Started Looking for a Job, by Degree (among full-time employees working at a place of employment

obtained at time of graduation or during graduate program)

| | ١ | ICSU | D | octoral | Master's | | |
|---------------------------------------|-----|--------|----|---------|----------|--------|--|
| | N | % | N | % | N | % | |
| 12 or more months before graduation | 128 | 21.8% | 30 | 32.6% | 98 | 19.8% | |
| 9-11 months before graduation | 102 | 17.3% | 20 | 21.7% | 82 | 16.5% | |
| 6-8 months before graduation | 121 | 20.6% | 29 | 31.5% | 92 | 18.5% | |
| 3-5 months before graduation | 195 | 33.2% | 9 | 9.8% | 186 | 37.5% | |
| 1-2 months before graduation | 35 | 6.0% | 3 | 3.3% | 32 | 6.5% | |
| Less than one month before graduation | 7 | 1.2% | 1 | 1.1% | 6 | 1.2% | |
| Total | 588 | 100.0% | 92 | 100.0% | 496 | 100.0% | |

Respondents having obtained full-time employment at the time of graduation or during their graduate program were also asked to indicate what resources had proven to be helpful in their job search.

Analysis reveals a number of differences between doctoral and master's graduates in the resources they found helpful. Over 40 percent of doctoral graduates with full-time employment indicated that a *NC State faculty member* had been helpful in their job search (42.1%) and one-fourth said that *personal/professional connection(s) in the company* (25.3%) had been helpful. In contrast, master's graduates were most likely to identify *LinkedIn* as a helpful resource in their job search (30.3%), followed closely by *internships/externships* (28.8%) and *on-campus interviews* (24.8%). Note that some resources may have in fact been helpful for those who used them, but have a smaller frequency overall because fewer respondents used that particular resource (e.g., clinical placement).

| Other | 33 | 5.3% | 2 | 2.1% | 31 | 5.9% |

^{*}Respondents could select more than one resource.

About one-third of all those who had secured full-time employment by graduation or during their graduate program said they had been on interviews for one (18.5%) or two (14.0%) different positions during their most recent job search. Close to 40 percent indicated they had gone on interviews for five or more positions (38.8%), with 14 percent having gone on interviews for 10 or more positions before accepting an offer. Seven percent of graduates with full-time employment said they did not go on any interviews during their most recent job search (7.2%).

Although doctoral degree recipients said they had started their job search far earlier than did master's degree recipients, those graduating with a master's degree reported going on interviews for more positions than those graduating with a doctoral degree. While 41 percent of master's graduates reported going on interviews for five or more positions (40.8%), just 28 percent of doctoral graduates said the same.

About half of all graduates obtaining full-time employment during their graduate program or at the time of graduation said that the position they accepted had been their only job offer (48.4%). About 40 percent said that they had received one (26.9%) or two (12.6%) job offers in addition to the one they accepted, with the remaining 12 percent reporting they had received three or more job offers in addition to the one they had accepted (12.1%). Master's students were more likely than doctoral students to indicate they had received more than one job offer from which to choose (53.8% vs. 39.8%).

Job Promotions and Salary Increases

Graduate students who said their full-time position will be at a place of employment for which they had begun working prior to (19.6%) or during the course of their graduate program (31.9%; Table 4) were asked whether they would be receiving a salary increase and/or a promotion/title change contingent upon receiving their degree. Sixty-one percent of these respondents, including over half of doctoral graduates (55.8%) and 39 percent of master's graduates (38.6%) indicated they would be receiving a salary increase and/or a promotion/title change at their current place of employment after completing their degree.

One-third of doctoral degree recipients who said they will be working at a place of employment they had obtained prior to graduation reported they would be getting both a salary increase and promotion/title change upon conferring their degree (32.6%), while one-fourth said they would be getting only a salary increase (23.3%). Among master's degree recipients, one-fifth indicated they would be receiving both a salary increase and promotion/title change after receiving their degree (19.1%), and 16 percent said they would be getting only a salary increase (16.1%). Three percent of master's graduates said they would be getting a promotion/title change without receiving an increase in their salary (3.3%).

Table 9: Job Promotion (among full-time employees continuing in place of employment had prior to graduation)

| | NCSU | | Do | octoral | Master's | |
|---|------|--------|----|---------|----------|--------|

| Both a salary increase and promotion/title change | 77 | 20.7% | 14 | 32.6% | 63 | 19.1% |
| None of the above | 221 | 59.4% | 19 | 44.2% | 202 | 61.4% |
| Total | 372 | 100.0% | 43 | 100.0% | 329 | 100.0% |

Employers

Graduate students securing full-time employment were asked the name of the institution or organization for which they will be working after graduation. Although NC State graduates accepted jobs in many different institutions and organizations, those hiring the greatest number of NC State May graduates were NC State University, the Wake County Public School System, and SAS. The top employer of doctoral degree recipients was NC State University, employing 19 percent of NC State doctoral graduates (19.2%), while the top employer of master's degree recipients was the Wake County Public School System, employing about four percent of NC State master's graduates (3.6%).

A complete list of the institutions and organizations where graduates will be working can be found in Appendix B.

Industry and Occupation

Sixty-two percent of all graduates with full-time employment indicated they will be working in a private, for profit business or organization (61.9%). About one-fifth said they will be working in the education sector, including 10 percent who said they will be working in a U.S. preschool, elementary, middle, or secondary school/school system (9.9%) and eight percent in a U.S. four-year college or university (7.9%). About eight percent of graduates having secured full-time employment said they will be working for the federal (4.7%), state (1.8%), or local government (1.2%). The remaining nine percent reported that they will be working in a private, not for profit business or organization (4.8%), will be self-employed (0.4%), or will be engaged in some "other" type of employment (3.4%).

There are a number of differences in the types of employment doctoral and master's graduates obtained. Doctoral degree recipients were far more likely than master's degree recipients to indicate they will be working at a U.S. four-year college or university (30.6% vs. 4.0%) or in a U.S. university-affiliated research institute (7.2% vs. 0.9%), and were slightly more likely than master's recipients to report working for the federal government (7.2% vs. 4.3%). In contrast, about two-thirds of master's students reported that they will be working in for profit business or organization (66.5%), compared to just over one-third of students receiving a doctoral degree (35.1%). Master's recipients securing full-time employment were also slightly more likely than doctorate recipients to be working for a U.S. preschool, elementary, middle, or secondary school/school system (10.7% vs. 5.4%) or a not for profit organization (5.2% vs. 2.7%).

Graduate students having obtained full-time employment were asked to select the type of industry and the job function of the position in which they will be employed from a list of industries and job functions. Although the graduates are heading into a wide range of industries, the most common industries in which NC State graduates report they will be working are *education* (17.3%), *computer software/hardware* (13.8%), and *engineering* (9.1%). While many doctoral and master's graduates report working in the same job industries, the most common industry doctoral graduates report they will be working in is *education* (31.5%), followed by *research* (14.4%). The most common job industries master's graduates report they pursuing are *computer software/hardware* (15.0%) and education (14.9%).

Those finding full-time employment were most likely to say they will have a job function related to engineering (14.4%), followed by education/teaching/curriculum development (10.8%) and software development (10.7%). The most common job functions reported by doctoral graduates are research and development (30.8%), education/teaching/curriculum development (17.8%), and engineering (11.2%), whereas the top job function reported by master's graduates is engineering (15.0%), followed by software development (11.8%), and education/teaching/curriculum development (9.6%).

Relationship of Job to Academic Program and Satisfaction with Job

The vast majority of graduate students with full-time employment indicated that the position in which they will be working after graduation is "directly related" to their graduate program (84.5%), with most of the remainder reporting that the job is "somewhat related" to their field of study (12.9%). All doctoral graduates reported that the position is either "directly related" (87.4%) or "somewhat related" (12.6%) to their graduate program. Ninety-seven percent of master's graduates said that the job is either "directly related" (84.0%) or "somewhat related" (13.0%) to their graduate program, while a very small number said that their job was "not at all related" to their program (1.2% "by choice" and 1.8% "not by choice").

Eighty-eight percent of those obtaining full-time employment said they were "very satisfied" (54.6%) or "satisfied" (33.2%) with the job in which they will be working after graduation, with those receiving a master's degree being slightly more likely than those receiving a doctoral degree to say they were "very satisfied" (55.3% vs 50.5%).

Job Location

While NC State graduates will be employed across the nation, and a few will be working in other countries, over half of those having accepted a full-time job say they will be staying in North Carolina (57.4%), with 39 percent working in the Research Triangle area (e.g., Raleigh, Durham, Chapel Hill). Those receiving a doctoral degree were slightly more likely than master's degree recipients to be working in the Triangle (42.2% vs. 38.5%) or outside the U.S. (6.4% vs. 1.7%).

A complete list of the states and countries where graduates will be working can be found in Appendix B.

^{*}Some respondents did not provide the name of the city in which they would be working and therefore region could not be determined.

Compensation

Graduate students with full-time positions were asked to indicate the different ways in which they will be compensated for their job.

While doctoral graduates with full-time employment said they will be compensated through a variety of methods, the vast majority said they will be receiving only a salary (86.5%). An additional five percent of doctoral graduates indicate they will be receiving a salary in combination with performance bonuses (5.4%).

About two-thirds of master's graduates said they will be getting paid only a salary (66.1%), while one-fifth indicated they will receive performance bonuses in addition to a salary (21.4%). Twelve percent of master's students said they will be compensated through "other" methods (12.5%).

| Total | 775 | 100.0% | 111 | 100.0% | 664 | 100.0% |

Respondents were asked to estimate their annual salary during the coming year. NC State's graduates with full-time employment (excluding those working in internships) report an average annual salary of \$78,745 (median = \$77,500). While doctoral and master's graduates reported similar average annual salaries (\$78,776 vs. \$78,565, respectively), the median annual salary reported by master's graduates (\$77,500) was higher than the median annual salary reported by doctoral graduates (\$72,500).

One-Time Compensation: Incentives and Relocation Packages

All graduate students with full-time employment were asked about one-time incentives, such as signing bonuses and company shares they received as a part of accepting the offer for the position in which they will be employed after graduation, and the dollar amount of the incentives they had received. Responses from those who said they "would prefer not to answer" or that they were "not sure" of the amounts have been excluded from analysis, but are noted in the text below.

Seventeen percent of doctoral graduates with full-time employment reported receiving a signing bonus (17.1%). Of those providing the amount they received, about two-thirds said it was for less than \$10,000, with the remainder reporting it was for \$15,000 or more. Additionally, three doctoral graduates selected the response option "would prefer not to answer" when asked the amount they had received and one other doctoral graduate said they were "not sure" of the amount.

Master's graduates with full-time employment were twice as likely as doctoral graduates to have received a signing bonus (34.8%). Close to half of master's graduates receiving a signing bonus and providing the dollar amount reported that the amount of the signing bonus was for \$10,000 or more (47.9%), with one-fourth indicating it was for \$15,000 or more (26.6%). A very small number of master's graduates receiving a signing bonus declined to answer (3.6%) or said they were "not sure" (1.8%) when asked about the amount they received.

A small percentage of graduates with full-time employment indicated receiving company shares as part of their job offer (13.5%), including 11 percent of doctoral graduates (10.8%) and 14 percent of master's graduates.

When asked to provide an estimated value of the company shares they received at the time of accepting the job offer, six of the doctoral graduates said the amount was for \$30,000 or less, while three other doctoral graduates said the amount was for \$50,000 or more. Three doctoral respondents said they "would prefer not to answer" when asked about the value of the company shares they had received.

Over half of the master's graduates who provided an estimated value of the company shares they had received said the amount was for \$20,000 or more at the time they secured their position (56.1%), with 23 percent indicating the value of the company shares was \$50,000 or more (22.7%). While the majority of master's graduates who said they had received company shares as part of their job offer provided an estimated value of the company shares at the time they secured full-time employment, over one-fourth said they "would prefer not to answer" (13.0%) when asked the amount, or that they were "not sure" (15.2%).

| Total | 75 | 100.0% | 9 | 100.0% | 66 | 100.0% | |

^{*}Responses of "would prefer not to answer" and "not sure" have been excluded from analysis.

Respondents with full-time employment were also asked to indicate whether they had received a relocation package. Over one-third of the doctoral students (36.7%) and 40 percent of the master's students (39.6%) said that such a package was "not applicable." However, about one-fourth of those with full-time employment said they were offered a relocation package (25.7% of doctoral students and 27.3% of master's students). Offers of relocation packages, not surprisingly, were closely related to whether or not the employee would be working in North Carolina. Forty-eight percent of doctoral graduates and over half of master's graduates (58.5%) who said they were working outside of North Carolina received a relocation package. In contrast, just 31 percent of doctoral graduates and 10 percent of master's graduates who said they would be working in North Carolina, but outside the Triangle, indicated they had received a relocation package (30.8% and 10.3%, respectively).

Seeking Employment

One-fourth of the doctoral students (25.2%) and one-third of the master's students (31.7%) responding to the May 2018 Graduate Future Plans Survey indicated they would be pursuing employment in the coming year (Table 1). About one-fifth of graduates said that as of the time of the survey they were seeking employment but did not have any prospects (22.5%) with a small number indicating they were currently negotiating with one or more specific organizations (6.6%) or that they had not yet begun to seek employment, but planned to do so within the next year (3.6%).

Notably, not all of the graduates who said they were seeking or planning to seek a job were unemployed. Close to one-third of doctoral graduates (30.6%) and 15 percent of master's graduates (14.7%) who indicated they were pursuing or planning to pursue employment also said they were employed, either full- or part-time, as of the time of the survey.

Table 26: Status of Plans to Pursue Employment (among all respondents)*

| | | ICSU = 1,218) | | octoral l = 143) | Master's (N = 1,075) | |
|--|-----|------------------|----|---------------------|-------------------------|-------|
| | N | % | N | % | N | % |
| Currently seeking position but have no specific prospects at this time | 274 | 22.5% | 21 | 14.7% | 253 | 23.5% |
| Currently negotiating with one or more specific organizations | 80 | 6.6% | 14 | 9.8% | 66 | 6.1% |
| Have not yet begun to seek employment, but plan on doing so within the next year | 44 | 3.6% | 3 | 2.1% | 41 | 3.8% |

^{*}Respondents could indicate more than one type of activity.

Table 27: Employment Status at the time of the survey (among those seeking or planning to seek employment)

| | N | ICSU | D | octoral | Master's | | |
|------------|-----|--------|-------|---------|----------|--------|--|
| | N | % | % N % | | N | % | |
| Employed | 61 | 16.2% | 11 | 30.6% | 50 | 14.7% | |
| Unemployed | 316 | 83.8% | 25 | 69.4% | 291 | 85.3% | |
| Total | 377 | 100.0% | 36 | 100.0% | 341 | 100.0% | |

The remainder of this section of the report first looks those who said they were actively seeking a job or were in the process of negotiation at the time of the survey, and then briefly at those who had not yet begun their job search but were planning to do so in the coming year.

The Job Search

Over three-fourths of the graduate students who as of the time of the survey were seeking employment or in the process of negotiating with one or more organizations said they first began looking for a job less than six months before graduation (78.3%). About one-third said they began their job search three to five months prior to receiving their degree (34.0%) and 16 percent said they started searching within the month leading up to graduation. Doctoral graduates were more likely than master's graduates to have started their job search early, with over half of doctoral graduates seeking employment beginning their search six or more months prior to graduation (54.8%). In contrast, about one-fifth of master's graduates said they had started looking for a job in the same period of time (18.3%), with 46 percent beginning their job search less than three months prior to graduation (46.5%).

Table 28: When Started Looking for a Job, by Degree (among those actively seeking employment or negotiating with one or more organizations)

| | NCSU | | D | octoral | Master's | |
|---------------------------------------|------|--------|----|---------|----------|--------|
| | Ν | % | N | % | Ν | % |
| 12 or more months before graduation | 18 | 5.4% | 4 | 12.9% | 14 | 4.7% |
| 9-11 months before graduation | 9 | 2.7% | 5 | 16.1% | 4 | 1.3% |
| 6-8 months before graduation | 45 | 13.6% | 8 | 25.8% | 37 | 12.3% |
| 3-5 months before graduation | 113 | 34.0% | 7 | 22.6% | 106 | 35.2% |
| 1-2 months before graduation | 94 | 28.3% | 4 | 12.9% | 90 | 29.9% |
| Less than one month before graduation | 53 | 16.0% | 3 | 9.7% | 50 | 16.6% |
| Total | 332 | 100.0% | 31 | 100.0% | 301 | 100.0% |

Close to three-fourths of graduates who said they were currently seeking employment reported that they had gone on an interview for at least one position during their most recent job search (72.3%), with one-third going on interviews for three or more positions at the time of the survey (36.4%). Those graduating with a doctoral degree were more likely than those graduating with a master's degree to have had an interview for at least one position (83.9% vs. 71.1%), and were more likely to indicate having gone on interviews for three or more positions (45.2% vs. 35.5%).

Doctoral graduates were also much more likely than master's graduates to report receiving at least one job offer as of the time they completed the survey (48.4% vs. 24.7%). About one-fifth of doctoral graduates (22.6%) and six percent of master's graduates (6.2%) said they had received two or more job offers.

Graduates who had received one or more job offers, but who were not in the process of negotiation at the time of the survey, were asked to indicate why the job offer(s) they had received had not worked out. The most common reasons given for not accepting a job offer include the job not being a good fit for their interests or career goals or dissatisfaction with the proposed compensation (e.g., salary too low).

Type of Work Seeking

The vast majority of graduate students who said that at of the time of the survey they were seeking employment and/or negotiating with one or more organizations indicated they were looking for full-time employment (87.9% of doctoral degree recipients and 93.1% of master's degree recipients), with most of the remainder looking for either full-time or part-time work.

All of the doctoral students who said they were seeking employment said they were looking for a job either "directly related" (57.6%) or "somewhat related" (42.4%) to their field of study. While master's graduates were more likely doctoral graduates to say they were looking for a job "directly related" to their graduate program (70.3% vs. 57.6%), a very small number said that they were looking for a job "unrelated" to their graduate program (0.7%), or that the relationship of the position to their program was "irrelevant" to their job search (1.7%).

The most common job function doctoral graduates were hoping to be employed doing was education/teaching/curriculum development (30.3%), followed by research and development (18.2%). The most common job functions master's graduates were looking to be employed doing were education/teaching/curriculum development (14.6%) and engineering (9.3%).

Location of Job Seeking

Sixteen percent of doctoral graduates who were seeking employment at the time they completed the survey said they were limiting their search to only North Carolina (15.6%). Over one-third said they were looking for a job somewhere in the U.S. including North Carolina and other states (37.5%), with an additional nine percent looking for a position in the U.S. anywhere except North Carolina (9.4%). About one-third said they would be considering employment both inside and outside of the U.S. (31.3%), and two doctoral graduates said they would be only looking outside the U.S. (6.3%).

One-third of master's graduates said they would be looking for employment only in North Carolina (33.4%). Forty-two percent said they were looking for a job somewhere in the U.S. including, but not limited, to North Carolina (42.1%), with a small number limiting their search to U.S. states excluding North Carolina (6.0%). The remaining 18 percent of master's graduates seeking employment indicated they were looking both inside and outside of the U.S. for employment (16.2%) or exclusively outside the U.S. (2.3%).

Table 34: Looking for Employment Inside or Outside of North Carolina, by Degree (among those actively seeking

employment or negotiating with one or more organizations)

| | NCSU | | Doctoral | | Ma | aster's |
|-------------------------------|------|--------|----------|--------|-----|---------|
| | Ν | % | Ν | % | Ν | % |
| Only N.C. | 106 | 31.7% | 5 | 15.6% | 101 | 33.4% |

| Total | 334 | 100.0% | 32 | 100.0% | 302 | 100.0% |

Future Job Seekers

Three doctoral graduates (2.1% of all doctoral graduates responding to the survey) and four percent of master's graduates (3.8%) said that while they had not yet begun to search for employment, they planned to do so within the coming year (Table 26). When asked when they planned to begin their job search, most of the respondents who had not yet begun their job search said they would start looking within three months after graduation.

Those who said they would wait until after graduation to begin their search for employment were asked about the reasons they were waiting. The most common reasons for waiting until after graduation to begin looking for employment were to gain more professional or academic experience in preparation for their career or to engage in preparation for pursuing another degree (i.e., studying for the MCATs), followed by devoting time to family (e.g., pregnancy, child care, etc.).

Table 35: When Will Begin Job Search, by Degree

| | ١ | NCSU | | octoral | Ma | aster's |

Further Education

This section of the report provides detailed information on further education being pursued by NC State May graduates. Thirteen percent of master's degree recipients who submitted the Graduate Future Plans Survey said they would be enrolled in degree program within the coming year (Table 1; 12.6%). As only one doctoral degree recipient reported planning to pursue another degree, the remainder of this section will look only at the graduate/professional school plans of master's degree recipients.

Current Status for Graduate/Professional School Attendance

Of the May 2018 master's graduates planning to return to graduate/professional school, half said they are already enrolled and are pursuing the degree (52.2%) and an additional one-fourth indicated they have been accepted and know where they will be going (23.1%). Three percent reported they have been accepted but are still undecided on whether or not or where they will actually attend (1.5%) or they have applied, but have not yet been accepted (1.5%). Finally, one-fifth said they had not applied, but plan to do so in the coming year (21.6%).

The remainder of this section reports on only those graduating with a master's degree who indicated they are currently enrolled in another degree program or have been accepted and definitely know where they will be attending graduate/professional school (Table 36; N = 101).

Table 36: Current Status for Further Graduate/Professional School Attendance, Master's Degree Recipients (among all those saying they were planning on going back to graduate/professional school in the coming year)*

| | Ν | % |
|---|-----|--------|
| Am already enrolled and pursuing the degree | 70 | 52.2% |
| Have been accepted and know where I'm going | 31 | 23.1% |
| Have been accepted but undecided | 2 | 1.5% |
| Have applied, but not yet been accepted | 2 | 1.5% |
| Have not applied but plan to do so within the next year | 29 | 21.6% |
| Total | 134 | 100.0% |

^{*}One doctoral student indicated a status of "Have applied, but not yet been accepted."

School Attending

Eighty-six percent of master's degree recipients who at the time of the survey were enrolled in another graduate program or knew where they will be attending graduate/professional school said they will be staying in North Carolina, with three-fourths staying at NC State University (75.2%). The vast majority of those with confirmed plans say they will be attending their first-choice school (93.1%).

Degree Seeking

Master's graduates with confirmed plans to pursue another degree in the coming year were asked in what degree program they will be enrolled. Over three-fourths said they will be enrolled in a doctoral program (78.2%) and 15 percent said they will be enrolled in a master's program (14.9%). A small number of graduates said they will be enrolled in a professional degree program (6.9%).

NC State graduates reported seeking a variety of master's degrees, but most commonly a MBA or MS. All survey respondents enrolling in a doctoral program will be pursuing a PhD or an EdD. The professional degrees NC State graduates report they will be seeking are a MD, DDS, JD, or DPT.

Graduate/Professional School Funding/Awards Received

Fifty-seven percent of master's students who said they had been accepted to graduate/professional school and knew where they would be going indicated that they had received funding and/or awards as part of their acceptance. The most commonly awarded type of funding was a *research* assistantship (44.6%), followed by *teaching assistantships* (29.7%) and *fellowships* (13.9%).

Table 44: Graduate/Professional School Funding/Awards, Master's Degree Recipients* (N = 101)

^{*}Respondents could select more than one type of funding/award.

NC State Experiences and Resources

All doctoral and master's graduates responding to the May 2018 Graduate Future Plans Survey were asked about their participation in various professional development experiences, as well as about the career-related resources they might have used while at NC State. This section of the report summarizes the information they shared about these experiences.

Professional Development Experiences

Respondents were asked whether or not they had participated in various work-related experiences while a graduate student at NC State, and if they had such an experience, how helpful it had been in securing a job offer. Graduate students were also asked the scholarship activities they had engaged in, including the number of times they had published an article or creative work in a peer-reviewed journal and/or presented scholarly work at a conference in their field while in graduate school.

The vast majority of graduate students indicated having participated in at least one professional development experience, including work-related experiences and scholarship activities (89.5%). Doctoral graduates were slightly more likely than master's graduates to have participated in at least one of the work-related experiences asked about (96.5% vs. 88.0%), and were much more likely than master's graduates to have participated in three or more different types of work-related experiences during their graduate program at NC State (55.3% vs. 20.2%). Similarly, doctoral graduates were much more likely than master's graduates to have published or presented at least one article or creative work (72.3% vs. 13.4%).

Two-thirds of doctoral graduates indicated having had a *research assistantship* (66.0%) and over half said they had a *teaching assistantship* (57.4%) while pursuing their doctoral degree at NC State. Forty-three percent of doctoral graduates said they participated in *research outside of an assistantship that was not published or presented* (42.6%) and over one-fourth had an *internship* (30.5%) or engaged in *volunteer work* (26.2%). When those who had obtained or were seeking employment were asked about the helpfulness of the work-related experiences they had in securing a

job offer, doctoral graduates were most likely to say having a job in their field of study had been "very helpful" in securing a job offer (69.6%), followed by research assistantships and research outside of an assistantship that was not published/presented (68.9% and 66.1%, respectively).

Sixty percent of doctoral graduates said they had *published at least one article or creative work in a peer-reviewed journal* during their graduate program. Just over half indicated producing two or more publications (52.1%), with about one-fourth publishing five or more articles/creative works while pursuing their degree (23.6%). Similarly, two-thirds of doctoral graduates reported *presenting at least one research paper, poster, or creative work at a conference in their field* (68.1%) over the course of their graduate program, with 44 percent doing so five or more times.

Forty-one percent of master's graduates said they had an *internship* (40.7%) during the course of their graduate program at NC State and one-fifth reported engaging in a *practicum* (19.8%) or having had a *teaching assistantship* (19.8%). While just eight percent of the master's graduates had a *co-op* experience (8.2%), such an experience was most likely to be rated as "very helpful" in securing a job offer among master's graduates obtaining or pursuing employment (70.2%). Similarly, two-thirds of those having a *job in their field of study* rated the experience as "very helpful" in their job search (66.7%). In addition, among the small number of master's graduates who reported having an *externship*, all six indicated that the experience had been "very helpful" in securing a job offer.

Relatively few master's graduates indicated having *published an article or creative work in a peer-reviewed journal* (4.2%) or having *presented a research paper, poster, or creative work at a conference* (11.5%). Less than two percent of master's graduates said they had produced more than one publication in a peer-reviewed journal (1.7%) and six percent said they presented at a conference two or more times (6.1%).

Career Service Offices

All respondents were asked if they had ever used one or more of the different career service offices on campus, and if so, how frequently they had used it and how they would rate the services provided. About 30 percent of doctoral graduates (29.1%) and just under half of master's graduates (45.3%) reported having used any career service offices at NC State.

NC State's Career Development Center (CDC) was used by the greatest number of graduate students, including one-fourth of doctoral graduates (24.1%) and 29 percent of master's graduates. The majority of those having ever gone to the CDC indicated doing so "just once or twice" (58.8% of doctoral graduates and 60.0% of master's graduates), with six percent of doctoral graduates (5.8%) and master's graduates (5.6%) having ever gone to the Career Development Center doing so "many times" or "on a regular basis." When asked to evaluate the services they had received, 85 percent of doctoral graduates having ever gone to the CDC rated its services "excellent" or "good" (85.3%) as did 81 percent of master's graduates (81.3%).

^{**}Those who were not seeking employment (e.g., because they were continuing their education or have some other plans following graduation) were given the option to select "not applicable" when asked about the helpfulness of the work-related experience. Responses of "not applicable" have been excluded from the analysis.

Use of specific career services offices varied widely by college. Among those responding to the survey, all eight doctoral students and over two-thirds of master's students graduating from the College of Textiles (COT) said they had gone to at least one of the career centers at NC State. In comparison, over 90 percent of doctoral and master's graduates in the College of Education said they had never used any career services offices at NC State during their graduate program.

Not surprisingly, college career services offices typically attracted few graduate students from outside their own college. Among graduate students in the College of Textiles responding to the survey, all eight doctoral graduates and over two-thirds of master's graduates said they had gone to the COT Career Services office. Similarly, over half of master's graduates in the Poole College of Management and the College of Design said they had used their own career services office (59.8% and 54.8%, respectively). Over half of master's graduates in the Institute for Advanced Analytics said they had gone to some "other" career services office on campus (55.6%), with almost all saying they had used the career services office in their school. In contrast, only a small number of doctoral graduates and about one-fourth of master's graduates (24.6%) in the College of Agriculture and Life Sciences indicated using their own career services office.

For the most part, the doctoral and master's graduates having gone to one of the college career centers said they did so "just once or twice" or "several times." However, there were a few exceptions. Graduate students were most likely to go to the College of Textiles career services office or the PCOM Career Development Center on a frequent basis, with one-fourth indicating they had gone to these offices "many times" or "on a regular basis."

Ratings for the college career centers were largely positive—career services offices were most often rated "excellent" or "good." Close to 90 percent of those who had ever used the PCOM Career Development Center rated its services as "excellent" (44.6%) or "good" (43.4%). In no case did more than a small number of users rate the services of any center as "poor" or "very poor."

Professional Development Services

Graduate students were asked whether or not they had used specific career-related services or professional development programs offered at NC State while pursuing their graduate degree.

Master's graduates were more likely than doctoral graduates to have used at least one of the career-related resources offered at NC State during the course of their graduate program. Over forty percent of master's graduates reported using *ePack* (43.0%) and/or *attending a career fair* (41.0%), and one-third said they had *attended employer information sessions* while a master's student at NC State (32.8%). Twenty-nine percent of master's graduates indicated *attending presentations on resume writing, interviewing, and other skills.* (29.0%) and about one-fourth said they had visited *NC State's Career Development Center website* (26.0%), and/or *participated in on-campus interviewing* (23.0%). A very small number of master's graduates indicated using any of the professional development services or programs offered by the Graduate School.

One-third of doctoral graduates indicated attending a career fair, either on-campus or off-campus (34.8%), and about 30 percent said they had attended presentations on resume writing, interviewing, and other skills (31.2%) and/or used ePACK, the Career Development Center's online tool for connecting NC State students with potential employers (30.5%). About one-in-five doctoral graduates said they had joined a professional society at NC State related to their career field (22.7%), attended employer information sessions (19.9%), and/or visited NC State's Career Development Center website (19.1%). When asked about resources available through the Graduate School they may have used while pursuing their degree, five percent of doctoral graduates indicated completing the Preparing the Professoriate program and three percent reported obtaining the Teaching and Communication Certificate (2.8%).

^{*}Respondents could select more than one resource.

Table 62: Graduate School Resources Used While At NC State, by Degree*

| | NCSU (N = 1,193) | | Doctoral (N = 141) | | Master's | |
|---|---------------------|------|--------------------|------|----------|--------|
| | | | | | (N = | 1,052) |
| | N | % | N | % | N | % |
| Accelerate to Industry (A2i) | 14 | 1.2% | 2 | 1.4% | 12 | 1.1% |
| Preparing the Professoriate | 18 | 1.5% | 7 | 5.0% | 11 | 1.0% |
| Obtained Teaching and Communication Certificate | 23 | 1.9% | 4 | 2.8% | 19 | 1.8% |

^{*}Respondents could select more than one resource.

The 40 percent of graduate students who said they had attended a career fair while pursuing their degree were asked which career fair(s) they had attended. Over half of those doctoral graduates and master's graduates reported attending the *Engineering Career Fair* (57.1% and 57.3%, respectively). About one-third of doctoral graduates (32.7%) and one-fifth of master's graduates said they had attended the *Graduate School Fair* at NC State.

^{*}Respondents could select more than one career fair.

Closing Comments

The Graduate Future Plans Survey closed by asking respondents to rate their overall satisfaction with their graduate program and with the career guidance they had received from their department and/or college while at NC State, and to reflect on how they are feeling about their future.

Close to 90 percent of the May 2018 doctoral and master's graduates said they were "very satisfied" (47.8%) or "satisfied" (40.4%) with their graduate program as a whole. Just five percent of doctoral graduates and three percent of master's indicated they were "dissatisfied" or "very dissatisfied" with their graduate program overall.

Two-thirds of the May 2018 doctoral and master's graduates combined said they were either "very satisfied" (30.5%) or "satisfied" (35.2%) with the career guidance they received from their academic department/college. While about one-fourth said they were "neutral" about the guidance they received (27.9%), just six percent said they were either "dissatisfied" (5.0%) or "very dissatisfied" (1.4%) with the career guidance they were provided by their department/college.

Overall, the May 2018 graduates are excited about their futures. When asked which statement comes closest to how they were feeling about their future, over two-thirds of doctoral and master's graduates said that they were "very excited" (69.9%) about what they will be doing, with an additional one-fourth saying they were "fairly excited." Just three percent of graduates said they were "not very excited" (2.4%) or "not at all excited" (0.2%).

Similarly, the vast majority of May 2018 doctoral and master's graduates also feel prepared for their futures. When asked about how prepared they felt for their future career paths, 97 percent of respondents said that they felt either "very prepared" (59.4%) or "somewhat prepared" (37.7%) for their future career paths. Just three percent of respondents said they felt "somewhat unprepared" (2.5%) or "very unprepared" (0.4%).
